“Experts Answer Frequently Asked Questions”
In the new documentary film, Abstinence Comes to Albuquerque, a ninth grader tells her mother that she’s heard some unusual things from a sexuality education program in her school. The family talks about their problems with the program, and a school board member speaks about its weaknesses. The film then profiles an abstinence-only-until-marriage program as well as a more balanced sexuality education program. Following the documentary are interviews with national experts on sexuality education and adolescent health.

This discussion guide is meant to help individuals and groups use the DVD for educational and advocacy activities that support balanced sexuality education in their communities. The guide is divided into three sections: “Background Information,” “Using This Documentary” and “Experts Answer Frequently Asked Questions.”

The first section provides background information to help you and those you work with understand the issues of sexuality education and adolescent health that are at the heart of the documentary.

In “Using This Documentary,” you will find discussion questions and ideas for using this DVD for educational purposes with parents, teens, and professionals, and for advocacy purposes with community activists, school board members, and state and local policymakers.

The final section, “Experts Answer Frequently Asked Questions,” contains a list of experts who are interviewed, and the questions they are asked. Viewers can access each expert’s interview through the menu button on the DVD and can follow along as the experts answer these important questions.

Abstinence Comes to Albuquerque provides a glimpse into a nationwide debate over what young people should be taught about sexuality. Through personal stories, community profiles, and expert interviews, the program highlights the differences between a strict abstinence-only-until-marriage approach and more comprehensive sexuality education.

This section provides some pertinent background information to help viewers better understand the issues played out in the documentary.

The Different Approaches to Sexuality Education

When discussing the sexuality education young people receive, many people refer to two distinct schools of thought: balanced and responsible sexuality education and abstinence-only-until-marriage programs. In reality, however, most schools in the United States fall somewhere between the two ends of the spectrum, and programs are often called by a variety of different names.

The following terms and definitions provide a basic understanding of the types of sexuality education programs that are currently offered in schools and communities. Remember, however, that names can be deceiving. It is important to look past labels and find out what young people in your community really are, or are not, learning in their sexuality education programs.

- **Comprehensive Sexuality Education**: Sexuality education programs that start in kindergarten and continue through 12th grade. These programs include age-appropriate, medically accurate information on a broad set of topics related to sexuality, including human development, relationships, decision making, abstinence, contraception, and disease prevention. They provide students with opportunities for developing skills as well as learning information.
Proponents of abstinence-only-until-marriage programs often conduct their own in-house evaluations and cite them as proof that their programs are effective. Outside experts, however, have found these evaluations to be inadequate, methodologically unsound, or inconclusive. A number of states have released evaluations of their statewide abstinence-only-until-marriage programs. The results have been disappointing. For example, a report released by the Minnesota Department of Health revealed that its statewide program, Minnesota Education Now and Babies Later (MN ENABL), has been ineffective in reducing adolescent sexual activity. The report concluded that, while well-implemented, “the intervention itself, however, was of low intensity and had low impact for students.” Similar reports from Arizona, California, Iowa, New Mexico, Pennsylvania, and Texas have also found that abstinence-only-until-marriage programs have little, if any, helpful impact on young people’s sexual behavior.

Virginity pledges are not an effective strategy. Although they were once the sole province of religious organizations, many secular groups and schools now host events where students sign “virginity pledges” as a way to promote premarital abstinence. Today, virginity pledges are also part of many abstinence-only-until-marriage curricula and programs.

Research has found that under certain conditions these pledges may help some adolescents delay sexual intercourse. When they work, pledges help this select group of adolescents delay the onset of sexual intercourse for an average of 18 months. However, the studies also found that those young people who took a pledge were one-third less likely to use contraception when they did become sexually active than their peers who had not pledged. These teens are therefore more vulnerable to the risks of unprotected sexual activity such as unintended pregnancy and STIs, including HIV/AIDS. Further research has confirmed that although some students who

What the Research Says About Sexuality Education

Over the years, many researchers have turned their attention to sexuality education in an effort to determine which approaches work best in helping young people delay sexual activity and prevent unintended pregnancy and sexually transmitted infections (STIs), including HIV/AIDS. This research clearly shows that a balanced approach to sexuality education is more beneficial for young people.

Abstinence-only-until-marriage programs are not effective. There are no published studies in the professional literature that show that abstinence-only programs will result in young people delaying sexual intercourse. In fact, at least one study has provided strong evidence that such a program did not delay the onset of intercourse.
take pledges delay intercourse, ultimately they are equally as likely to contract an STI as their non-pledging peers. The study also found that the STI rates were higher in communities where a significant proportion (more than 20 percent) of the young people had taken virginity pledges.

- **Balanced education about sexuality is effective.**
  Numerous studies and evaluations published in peer-reviewed literature have found that education about sexuality (comprising programs that teach teens about both abstinence and contraception/disease prevention) is an effective approach to helping young people delay their initiation of sexual intercourse.

  Reviews of published evaluations of sexuality education, HIV-prevention, and adolescent pregnancy-prevention programs have consistently found that they can
  - delay the onset of intercourse
  - reduce the frequency of intercourse
  - reduce the number of sexual partners
  - increase condom or contraceptive use

And that they
  - do not encourage teens to start having sexual intercourse
  - do not increase the frequency with which teens have intercourse
  - do not increase the number of sexual partners teens have

These conclusions are based on a number of research studies, articles, and publications that may be very useful to you in your advocacy efforts. The citation for each article is listed below.

**Federal Funding for Sexuality Education**

Despite this research, the federal government provides no funding for comprehensive sexuality education programs. Unfortunately, a great deal of federal money has been spent on unproven and potentially harmful abstinence-only-until-marriage programs. In fact, more than one billion taxpayer dollars have been spent on abstinence-only-until-marriage programs since 1981. Between 2000 and 2005, more than $600 million was spent on these programs.

Programs that receive these federal funds must adhere to the following strict, eight-point definition of “abstinence education.”

*Section 510(b) of Title V of the Social Security Act, P.L. 104-193:* For the purposes of this section, the term “abstinence education” means an educational or motivational program which:

- has as its exclusive purpose teaching the social, psychological, and health gains to be realized by abstaining from sexual activity;
- teaches abstinence from sexual activity outside marriage as the expected standard for all school-age children;
- teaches that abstinence from sexual activity is the only cer-
tain way to avoid out-of-wedlock pregnancy, sexually trans-
mittled diseases, and other associated health problems;

- teaches that a mutually faithful monogamous relationship
  in the context of marriage is the expected standard of
  sexual activity;

- teaches that sexual activity outside of the context of
  marriage is likely to have harmful psychological and
  physical effects;

- teaches that bearing children out-of-wedlock is likely to
  have harmful consequences for the child, the child’s par-
  ents, and society;

- teaches young people how to reject sexual advances and
  how alcohol and drug use increase vulnerability to sexual
  advances, and

- teaches the importance of attaining self-sufficiency before
  engaging in sexual activity.

Support for Comprehensive Sexuality Education

Although the federal government has lent its seal of approval to
abstinence-only-until-marriage programs, the majority of the coun-
try actually supports a balanced approach. Numerous surveys of
educators, parents, voters, and young people have found over-
whelming support for teaching young people a wide-range of topics
and providing medically accurate information.

- One study found that 93 percent of parents of junior high
  school students and 91 percent of parents of high school
  students believe it is very or somewhat important to have
  sexuality education as part of the school curriculum.¹

- The same study found that 99 percent of parents of high
  school students believe HIV/AIDS is an appropriate topic
  for sexuality education programs in schools; 98 percent
  believe sexually transmitted diseases are an appropriate
  topic; 97 percent believe basic information about how
  babies are made, pregnancy, and birth are appropriate top-
  ics; 93 percent believe that birth control and other meth-
  ods of preventing pregnancy are appropriate topics; 85
  percent believe information on how to use and where to
  get contraceptives is an appropriate topic; and 83 percent
  believe abortion is an appropriate topic for sexuality edu-
  cation programs in schools.²

- A 2002 poll of registered voters found that 90 percent of all
  respondents agreed that students should receive age-appro-
  priate and medically accurate sex education that begins in
  the early grades and continues through twelfth grade.³

In addition, most major medical, public health, and education organ-
izations also support this approach. In fact, more than 140 national
organizations came together to form the National Coalition to
Support Sexuality Education (NCSSE), a group committed to med-
ically accurate, age-appropriate comprehensive sexuality education
for all children and youth in the United States. Organizations that
support comprehensive sexuality education include:

- American Academy of Pediatrics
- American College of Obstetricians and Gynecologists
- American Medical Association
- American Nurses Association
- American School Health Association
- The Institute of Medicine
- National Education Association

**USING THIS VIDEO**

This section is designed to help individuals and groups use this video to encourage discussion and help support comprehensive sexuality education in their communities and schools. It provides ideas for working in education settings with young people and parents, as well as suggestions on how to use this DVD as an advocacy tool when working with state and local policymakers.

**Education with Young People**

This DVD is relevant to and could be screened in numerous high school classes—government, civics, English or language arts, health, family life, or sexuality education. It engages students in critical thinking about the needs of adolescents and the policies that have an impact on their health and education, and encourages young people to look at questions of free speech and separation of church and state. The documentary also raises issues of how decisions are made in the school community, and how students, parents, teachers, and administrators work to meet the needs of all the students.

Alternatively, you could show this film in an after-school program, to young people involved in community service activities, youth development programs, or any other community setting.

You might want to introduce the film to young people in the following way:

- “Sexuality education is an issue that is important to many people, but sometimes it can be hard for everyone to agree on how best to provide it. This film shows what happened in Albuquerque, New Mexico, when a student told her mother some of the things she was hearing from a program in her school. As you watch the documentary, pay attention to what the teenagers do, what the parents do, what the school board does, and what the professionals from local, state, and national organizations do about sexuality education for young people.”
Education with Parents

As is shown in the documentary, parents are concerned about their children’s sexuality education. According to a recent study, 94 percent of parents believe it is appropriate for students to learn about birth control and how to deal with the issues of being sexually active, 91 percent think it is appropriate to teach about making sexual choices based on individual values, and 83 percent support students learning how to use condoms.

Presentations to parents can be organized in people’s homes as “house parties”; bringing together people who know one another from their neighborhood, faith community, work, their children’s school or recreational activities, or other social networks.

Meetings can also be organized through community centers, nonprofit organizations, public libraries, or houses of worship. It is best to have these meetings as conversations rather than large community events, as people tend to be more comfortable talking in smaller groups. Try to keep the group to less than 20 people.

Once you have the group assembled, you might introduce the documentary by talking about the fact that young people get sexuality education from a variety of sources, including parents, their friends, school, the media, and other organizations. You can explain that since 1996 funding from the federal government has paid for programs that have as their “exclusive purpose, teaching the social, psychological, and health gains to be realized by abstaining from sexual activity” until marriage. Then go on to introduce the film by saying that this documentary shows what happened in Albuquerque when one of these federally funded programs was presented in a public school.

After screening the film, ask what people thought about it. You might want to use the following discussion questions to get the dialogue started.

- What was your reaction to seeing this film?
- At the end of the film, Sarah’s father, Mr. Rodriguez, says that he thinks education should not be one-sided. Do you agree or disagree with his opinion? Why?
- Were you surprised to learn about the controversy over teaching an abstinence-only-until-marriage program in the school? Why or why not?
- There were two groups of students shown in the film: the peer educators who were teaching abstinence in Socorro and the peer educators in Albuquerque who were teaching about contraception. What did you think about the work each group was doing?
- The New Mexico secretary of health said that they decided to use the abstinence money to teach students in the sixth grade and under. Why do you think they made this decision? Do you think it was a wise decision? Why or why not?
- In her interview, Leslee Unruh, the director of the Abstinence Clearinghouse, says, “In reality kids are NOT going to have sex?” Do you agree with her? Why or why not?
- What do you think students in our community need for sexuality education?
- In this film, a parent complained to the school board about something she didn’t like. We saw that there were school board members and a local doctor who agreed with her. Over the course of a year, many discussions happened with many people, and the state finally decided to change the way it was using the government money. How do you think that happened? What lessons can we learn from these actions?
- Who is responsible for making sure that public schools teach the information that you and your peers need to know?
Advocacy efforts are most successful when they involve diverse members of the community. Therefore, you might want to use this film to introduce the topic to a variety of community members and encourage them to take action. Some ideas on how to do this include:

- Organize a viewing at the local library. Invite the PTA and other parent organizations. Use the events in the documentary to highlight how important parents are in advocacy efforts. Ask participants what they might be able to do to help support comprehensive sexuality education in your community.
- Contact local public health and education organizations and arrange a time to show the DVD to their board members and staff. Ask them what their organization can do to advocate on this issue. (Hint: Many of these organizations are probably working on these issues already and you might also want to find out how you can contribute to their efforts.)
- Organize a viewing for young people. Young people are obviously the ones most affected by decisions about sexuality education and as such they can be powerful voices in this debate. Invite local young people from your community to view the documentary and follow it with a discussion/training about how they can be advocates.

Once you have organized members of your community, you will want to bring this issue to the attention of state and local policymakers, as ultimately these individuals have control over the messages young people will learn. This documentary can be a great first step in introducing the topic to policymakers, many of whom are likely unfamiliar with the debate over sexuality education. Some ideas of how to do this include:

- Send a copy of the DVD to key state legislators, especially those who oversee funding for abstinence-only-until-marriage programs. Make sure to include a cover letter explaining who you are, your position on sexuality education, and specific ideas on how the legislator can support such pro-
Throughout your education and advocacy efforts, questions will no doubt come up about sexuality education, virginity pledges, adolescent pregnancy, abstinence-only-until-marriage programs, and domestic and international policy. Many of these questions are answered by experts in the DVD that accompanies the documentary. The following list of questions can help you determine which interviews contain the information you are searching for; simply use the DVD’s menu to jump to that interview.
